Road Badger Inc.
P.O. Box 4244
Edmonton, Alberta T6E 4T2

ATTENTION: Mr. Roy Olson

We would like to thank you for the opportunity to work with you in Wheatland County. We were very impressed with the Road Badger's ability to mix in our Q-X DC-40 stabilization product.

A road description is as follows; it was a newly constructed road base with a clay cap. This was to be overlaid with a 2" to 3" depth of fresh gravel with our product being incorporated into it to form a dust free and stabilized road traveling surface.

For product application, the gravel was bladed into a 14' wide mat approximately 4" to 6" in depth. The distributor truck applied our Q-X DC-40 product in two passes and the Road Badger was able to mix the product immediately behind the truck covering the full width of the mat in three passes. Following that, the mixed material was evenly bladed across the road surface and compacted accordingly.

The Road Badger performed the product mix in an effective and efficient manner. Based on time documentation, it showed that the Road Badger can be effective in mixing up to 8 kilometers per 8 hour day in the above manner. This is to be compared with blade mixing requiring two graders being able to do between 1 and 2 kilometers maximum in an 8 hour day or a Reclaimer being utilized with a production maximum of approximately 1 kilometer a day.

It is easy to see that the Road Badger also has the ability to rehabilitate old roads, reclaiming the gravel and petroleum based soil stabilization or dust suppressant products without having to necessarily add new product thereby allowing for substantial cost savings of up to \$15,000.00 (CDN) per kilometer.

Thank you.
